  Completed in 2015

About Me

Problem solver and fast learner with strong communication skills. I am motivated to upgrade and expand my skill set through mentorship and challenging projects. I enjoy working collaboratively but can also run with projects independently. I am excited about the prospect of joining a prestigious company.

Professional Experience

Cogizant Technology Solutions. | Programmer Analyst

June 2023 – Present

- Developing and maintaining financial planning and budgeting enterprise application of Oracle Hyperion (EPM) - EPBCS.
- Helping organization understand their data and use it to make better business decisions.
- Developing Hyperion Planning environments, including outlines, load rules, calculation scripts, partitions, web forms and security, system testing, and training of end-user and Client support teams

Projects

Airbnb Clone - SanBnb

SanBnb is a cutting-edge full-stack application that mirrors the functionality of Airbnb, providing an exceptional user experience for both travelers and property owners alike. With robust sign-up and login features, seamless integration of Next.js 13 as the client and server, MongoDB as the database, and Prisma for efficient data management, SanBnb revolutionizes the vacation rental industry. SanBnb offers a comprehensive range of features for both travelers and property owners. Users can effortlessly search for their ideal living spot using advanced filters, view detailed property listings, and make bookings securely within the platform. Property owners can easily list their properties, manage bookings, set pricing and availability using SanBnb's intuitive interface. Whether you're planning a weekend escape or looking to list your property for rent, SanBnb is your go-to platform for vacation rentals.

Projects

Movie App

Movie Application, a user-friendly platform that provides a curated list of movies along with their ratings, powered by an API integration. Whether you're a film enthusiast looking for recommendations or just want to explore new movies, our application has got you covered.

Expense Tracker

M Expense Tracker is a user-friendly application built with React.js that helps you track and manage your expenses effectively. Whether you're new to coding or just starting out with React.js, this project provides a great opportunity to learn and practice your skills while creating a useful tool for personal finance management.

Shopping Cart

QuickCart is a user-friendly frontend shopping cart application developed using React.js and Redux Toolkit. Designed with simplicity and efficiency in mind, QuickCart allows users to browse, filter, categorize, and add products to their shopping cart seamlessly. QuickCart empowers users to find their desired products quickly and efficiently. With advanced filtering options, users can refine their search based on various attributes such as price range, brand, size, color, and more. Additionally, QuickCart supports categorization, making it convenient to navigate through different product categories and find what you need with ease. Using seamless integration of Redux Toolkit, the state management library, QuickCart ensures a smooth and responsive shopping experience, allowing users to perform CRUD (Create, Read, Update, Delete) operations on their cart effortlessly. Experience the simplicity and efficiency of QuickCart, your go-to shopping cart application. Whether you're looking for a specific product, organizing your shopping list, or managing your cart effortlessly, QuickCart is here to enhance your shopping journey.
